

## Pesticides Requiring Approved Handler Control When Used

This paper lists (alphabetically by trade name) transferred pesticides that are required to be under the control of an **Approved Handler** if, and when, they are used in a wide dispersive manner, by a commercial contractor or applied onto or into water. **There are no restrictions on the sale of these pesticides to people who are not Approved Handlers.** The Approved Handler control only applies at the point of use.

If these products are sold in small pack sizes for domestic or home garden use by the general public (i.e. by someone who is not a commercial contractor carrying out work for hire or reward), they are unlikely to be used wide dispersively, and therefore the Approved Handler control will not apply.

Products that have both the Approved Handler and Tracking control only are not included in this list. For further information on the transfer of pesticides, including the list of pesticides that require approved handlers and tracking, as well as a link to the Hazardous Substances Register see:

<http://www.ermanz.govt.nz/hs/transfer-pesticides.asp>.

This list records substances which have been transferred to the HSNO Act and may not include all trade names. The list **does not** include new substances which have been approved under Part V of the Act which may also require tracking or approved handlers. Check with the manufacturer or your distributor if you are not sure if your product has these controls. Alternatively search our register at <http://www.ermanz.govt.nz/search/register.html>
