

## Veterinary medicines requiring approved handler controls

This paper lists (alphabetically by trade name) veterinary medicines that will be required to be under the control of an **Approved Handler**. Some of these substances will also need to be **Tracked**.

These products were transferred to the Hazardous Substances and New Organisms (HSNO) Act on 1 July 2005. For further information on the transfer of veterinary medicines please see: <http://www.ermanz.govt.nz/hs/transfer-veterinary-medicines.asp>.

### Veterinary Medicines that require Approved Handlers and Tracking

The following veterinary medicines are acutely toxic and require approved handlers and tracking. These controls apply regardless of the amount of the product being handled (e.g. used, stored manufactured or sold).

- Asuntol Liquid
- Enkamphos 1250
- Rumensin Technical
- Supreme D.F.F.
- Xterminate 40

### Veterinary Medicines that require Approved Handlers only

The following veterinary medicines that are flammable, oxidisers or toxic require approved handlers at and above certain trigger quantities (as specified below). **There is no requirement for these substances to be tracked.**

#### Flammable Liquids

These products require an approved handler at quantities of 250 litres or more (when in containers greater than 5 litres) or 500 litres or more (when in containers up to and including 5 litres).

- Anizyme
- Chloromide Antiseptic Pump Spray
- Debrisol
- Dectomax Pour-on Endectocide
- Delmycin Ear Drops
- Erase
- Flyaway
- Frontline Spray
- Iodine Tincture Spray
- Ivomec Pour-on for Cattle and Deer
- Noromectin Pour-on
- Oxyvet LA
- Penetrene A Liniment
- Revolution for Cats
- Revolution for Dogs
- Revolution for Puppies and Kittens
- Stronghold for Kittens
- Stronghold for Puppies
